

FOUNDATIONS OF COMPUTING AND DECISION SCIENCES

EDITORIAL POLICY

Foundations of Computing and Decision Sciences (FCDS) publishes high quality, original papers that contribute to research in the fields of computing and broadly understood decision sciences. The relation with ongoing research should be demonstrated by providing proper reference to the recent literature.

FCDS welcomes the following types of contributions:

- original theory and methodology papers,
- innovative application papers,
- review articles providing a comprehensive review on a scientific topic,
- short communications, including comments on papers previously published in FCDS.

All submissions to FCDS must be well written and accessible to a wide variety of readers, and should represent a clear advance in the state of the art.

Due to space limitations, articles are normally limited to 28 journal pages. Exceptions can be made in special cases only with the concurrence of the reviewers and the editors.

Submission of a manuscript to FCDS is representation by the author(s) that it has not been previously published in any language, copyrighted or submitted simultaneously for publication elsewhere, and the copyright for the article will be transferred to the publisher upon acceptance of the article.

Papers that have appeared in conference proceedings will be considered only on meeting the following 2 conditions: (i) they are significantly revised and (ii) their previous appearance is explicitly indicated in both the cover letter to FCDS and a footnote on the first page.

Plagiarism and all forms of *ghostwriting* and *guest authorship* are indication of scientific dishonesty. The editorial office will document all indications of scientific dishonesty and expose them by informing the adequate institutions.

Papers written in poor English will be rejected and not sent out for review. A paper may also be rejected because in the opinion of the editor it does not make a sufficient scientific contribution, even if some of the reviewers support publication.

All submitted papers that conform to the editorial policy will be refereed. However, the manuscripts that do not will be rejected without refereeing.

At least two independent reviewers with expertise in the topical field are appointed to each submission. Their identities remain unknown to the author(s). The review process usually takes from 6 to 8 weeks. Once at least two reviews have been received and considered by the editors, a decision letter is sent to the corresponding author.
